

Name :

Roll No. :

Invigilator's Signature :

CS/B.OPTM/SEM-4/BO-402/2011

2011

**OPHTHALMIC & OPTICAL INSTRUMENTATION &
PROCEDURE – II**

Time Allotted : 3 Hours

Full Marks : 70

The figures in the margin indicate full marks.

*Candidates are required to give their answers in their own words
as far as practicable.*

GROUP – A

(Multiple Choice Type Questions)

1. Choose the correct alternatives/Fill in the blank for any *ten* of the following : $10 \times 1 = 10$
 - i) Blue filter is used in
 - a) Schiotz tonometry
 - b) non-contact tonometry
 - c) applanation tonometry
 - d) indentation tonometry.
 - ii) Perimetry is useful in
 - a) retinitis pigmentosa b) optic nerve disease
 - c) glaucoma d) all of these.
 - iii) B-scan is used to diagnose
 - a) axial length b) retinal detachment
 - c) vitreous detachment d) all of these.

CS/B.OPTM/SEM-4/BO-402/2011

iv) In Humphrey Autoperimeter the unit of illumination is

- a) Apostilbs
- b) candles
- c) decibels
- d) lumen.

v) Blind spot in an example of

- a) positive scotoma
- b) pathological scotoma
- c) physiological scotoma
- d) none of these.

vi) The excitation peak of fluorescein dye is

- a) 360 nm
- b) 494 nm
- c) 594 mn
- d) 720 nm.

vii) Pelli-Robson contrast sensitivity chart consists of letters which subtend an angle of at a distance of one metre.

- a) 1°
- b) 3°
- c) 5°
- d) 15° .

viii) Number of points tested on a 24 - 2 HVF report is

- a) 36
- b) 54
- c) 72
- d) 15.

CS/B.OPTM/SEM-4/BO-402/2011

- ix) If faculty to perceive one of the three primary colours is completely absent, the condition is called

(Fill in the blank)

- x) HRR (Hardy Rand Rittler) test is

- a) contrast sensitivity test
- b) visual acuity test
- c) pseudo-isochromatic chart test
- d) stereopsis test.

- xi) All are included in reliability indices (in a perimetry report) except

- a) false positives
- b) false negatives
- c) fixation losses
- d) mean deviation.

GROUP – B
(Short Answer Type Questions)

Write short notes on any *three* of the following.

$$3 \times 5 = 15$$

2. Non-contact tonometers.
3. "Hypofluorescence" on F.F.A.
4. "Reliability parameters", (Reliability Indices) in a standard 24-2 H.V.F. (Humphrey Visnal Field) test report.
5. Different phases of a standard 'FFA'.

CS/B.OPTM/SEM-4/BO-402/2011

GROUP – C

(Long Answer Type Questions)

Answer any *three* of the following.

$$3 \times 15 = 45$$

6. a) Discuss the basic differences between Manual kinetic perimetry (Goldmann perimeter) and Automated static perimetry (Humphrey perimeter).

- b) Discuss ‘Global Indices’ in a standard Humphrey perimetry report (discuss MD, PSD, STF, CPSD).

- c) Write a note on Typical glaucomatous field defects.

$$5 + 5 + 5$$

7. a) Discuss the fixed area (variable force) Goldmann Applanation Tonometer.

- b) Explain the role of ‘scleral rigidity’ and the role of Friednwald nomogram.

$$7 \frac{1}{2} + 7 \frac{1}{2}$$

8. a) Name any *four* commonly used orthoptic instruments.

- b) “A synaptophore can be used for both diagnostic and therapeutic purposes.” Explain.

- c) Explain Young-Helmholtz theory of colour vision.

$$2 + 8 + 5$$

9. a) Discuss the basic principles of ocular ultrasonography.

- b) How is A-scan Biometry done ?

$$5 + 10$$

=====
